# Score Meter Charts

Most people who know us will attest that we are a big fan of using gauge and bullet charts or altering the standard Excel charts to make them more visually appealing. So when a colleague asked us if I could create a gauge-style graph with an arrow to indicate the result (like a linear speedometer), our exact words were challenge accepted.

How to create a new Score meter chart?

Select the range which contains Names, Values, and Colors (3 columns)

Click on the Score Meter chart icon on the Ribbon.
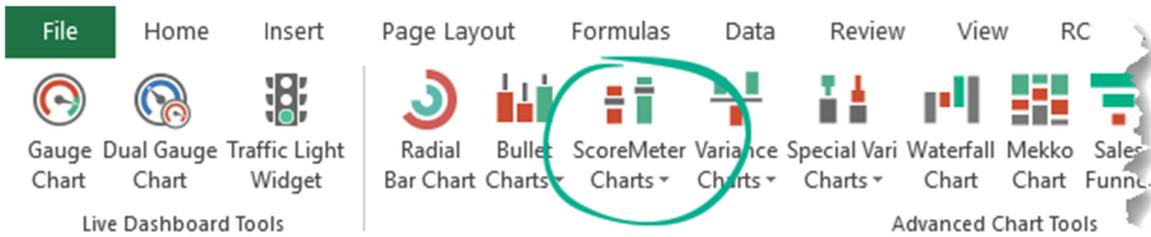

Use the drop-down menu to select the chart type.
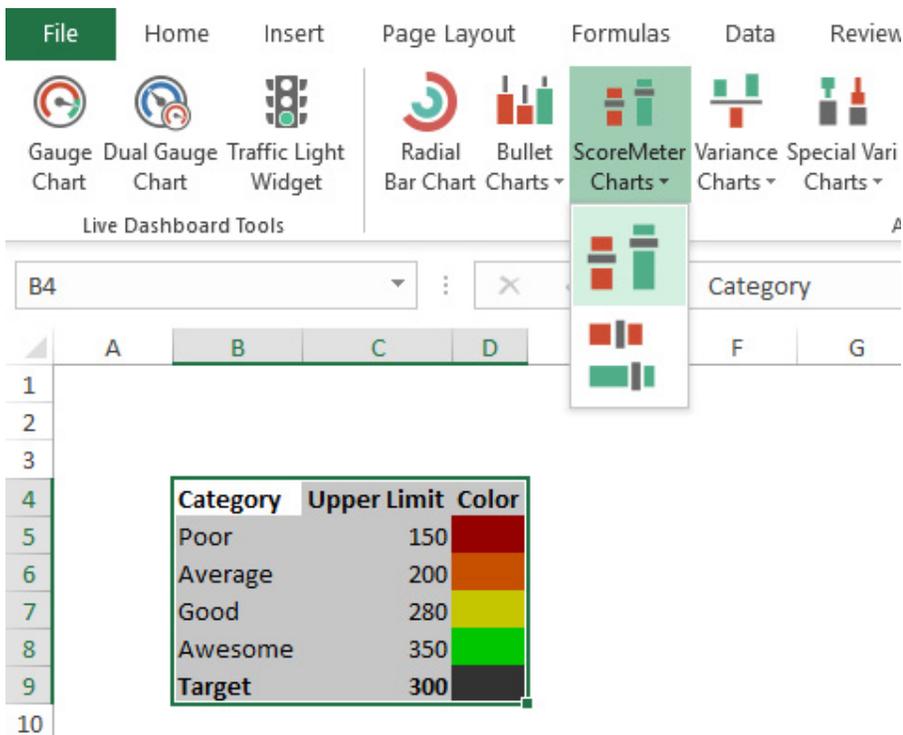

You can use two different bullet chart types: vertical or horizontal.

Click on the Bullet chart icon and add the minimum value (Default = 0)
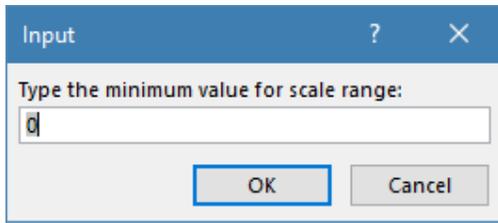

Input ? ✕

Type the minimum value for scale range:

0

OK   Cancel

Click OK, and it's done.

	A	B	C	D	E	F	G	Z	AA	AB	AC	A
1												
2					350							
3												
4		Category	Upper Limit	Color								
5		Poor	150		300							
6		Average	200									
7		Good	280		250							
8		Awesome	350									
9		Target	300		200							
10												
11					150							
12												
13					100							
14												
15					50							
16												
17					0							
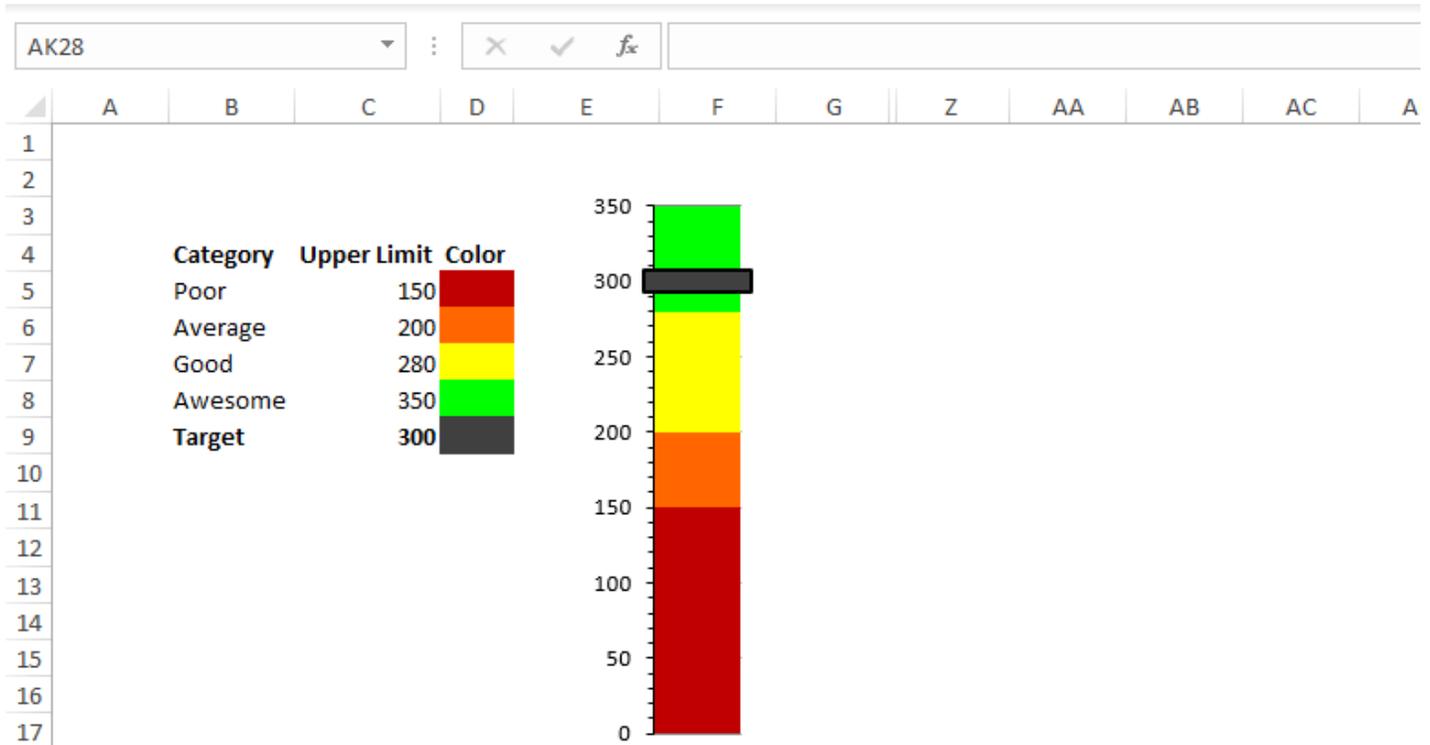

You can change the values in real time and copy/move and resize the score meter.
